

Commissioning Services

BaselineES has developed and implemented thousands of commissioning and re-commissioning projects, at locations around the globe, including all types of mechanical, control, and energy efficiency equipment and systems.

We help our clients improve facility operational and environmental performance and reduce ongoing energy and maintenance expenses by conducting:

- New Construction & Remodel Commissioning
- Existing Facility and Building Systems Negawatt Re-Commissioning
- Existing Facility Condition Assessments
- LEED and Conventional Commissioning

BaselineES and its principals have completed large-scale multi-site commissioning and re-commissioning projects for major chains in the United States, Canada, the United Kingdom, Australia, Korea, and China.

Optimize your facility equipment, mechanical systems, and controls

We take the responsibility of commissioning our clients' mechanical, electrical, plumbing and refrigeration systems seriously, and ensure our clients' facility assets and systems are placed into service without design, equipment, or installation defects.

BaselineES offers a thorough and comprehensive solution from beginning to end – carefully documenting all issues, working with client personnel or service contractors to complete any

Reduce energy consumption

Maximize performance

Minimize operational costs

needed maintenance in order to bring the facility to optimum energy and operating efficiency, and offering extended monitoring to maintain optimized system setpoints and operations years after the commissioning has been completed.
